DETAILED ACTION

1. Claims 1, 2, and 4-14 are pending for examination as interpreted by the examiner. The amendment and arguments filed on 12/12/06 were considered.

Response to Arguments

2. Applicant's arguments have been fully considered and are persuasive. The rejection of all claims except claim 12 has been withdrawn.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claim 12 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 12 is drawn to a "program" *per se* or non-tangible signal with "program", *per se*, or non-tangible computer readable medium (as defined in the specification on page 12, lines 10-13 as being a signal) with "program", *per se*, as recited in the preamble and as such is non-statutory subject matter. See MPEP § 2106.IV.B.1.a. Data structures not claimed as embodied in tangible computer readable media are descriptive material *per se* and are not statutory because they are not capable of causing functional change in the computer. See, e.g., *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure *per se* held nonstatutory). Such claimed data structures do not define any structural and functional interrelationships between the data structure and other claimed aspects of the invention, which permit the data

structure's functionality to be realized. In contrast, a claimed tangible computer readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure's functionality to be realized, and is thus statutory. Similarly, computer programs claimed as computer listings *per se*, i.e., the descriptions or expressions of the programs are not physical "things." They are neither computer components nor statutory processes, as they are not "acts" being performed. Such claimed computer programs do not define any structural and functional interrelationships between the computer program and other claimed elements of a computer, which permit the computer program's functionality to be realized.

Allowable Subject Matter

4. The following is an examiner's statement of reasons for allowance:

Claims 1, 2, and 4-14 are allowed over the prior art because of the references cited in the record, considered in combination or alone, fail to suggest or fairly teach the given combination of signals utilized to drive the optical emission unit as recited in the independent claims. All other claims are allowed with their respective allowable parent claims. A list of the closest prior art is provided in addition to the art cited in previous actions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
